

Environmental Policy

At Aldowa B.V. we recognize our responsibility towards the environment and are committed to conducting our business operations in an environmentally responsible manner. We strive to minimize our impact on the environment and continually improve our environmental performance. This policy outlines our commitment to improving our façade systems, implementing processes to cycle our products, reducing greenhouse gases, and compliance with environmental regulations.

Expectations supply chain

Aldowa B.V. is aware that we need to work together with our suppliers in order to improve our façade systems. We only shape and assemble sourced parts and materials that we don't produce ourselves, so we need our partners in order to make a change in the product composition. The start of this ambition to improve the environmental footprint of our façade systems was made together with our tier 1 final manufacturing stage facilities and we all are committed to improving our part in the production cycle in order to comply with the cradle-to-cradle requirements.

Commitment to addressing any high-risk environmental issues

Aldowa B.V. is committed to addressing any high-risk environmental issue identified via the risk assessment, including any de facto high-risk issues. We will comply with all applicable environmental laws, regulations, and other requirements related to our operations. We will strive to go beyond mere compliance and adopt best practices to protect the environment. As a method to ensure continuous improvements in the supply chain Aldowa plans to use the cradle-to-cradle certifications as a guideline to help improve the production supply chain and to showcase our commitment to eliminate the possible risks involved.

Pollution Prevention

We are committed to preventing pollution associated with our activities, products, and services. We will strive to reduce and minimize our emissions, waste generation, and the consumption of natural resources. Whenever possible, we will adopt cleaner technologies and processes to minimize our environmental footprint.

Resource Conservation

We will make every effort to conserve resources such as energy and water by promoting efficient use and adopting appropriate conservation measures. We will also strive to minimize our use of hazardous substances and promote the use

Staff responsible for implementation of environmental improvement plans:

Employee	Department	Responsibility
Roel Rennen	Sales	Sales related implementations
Rick van Horssen	Engineering	Product related implementations
Michael Baert	Production	Production related implementations
Martien Trouborst	Project management	Process related implementations
Nico Huibers	Purchase & safety	Purchase & safety related implementations
